

MOBILE FUJI KING DEBARKER

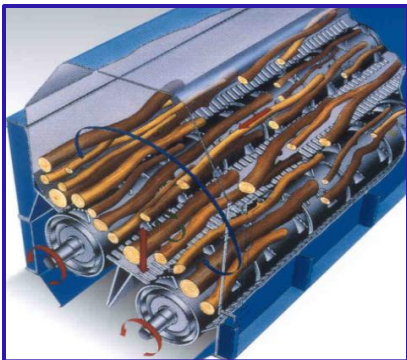

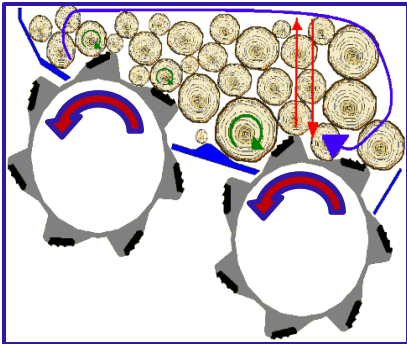

Specifications

Features

- Trailers are designed for optimum reliability and performance
- Modular approach simplifies set-up and transport
- Can be supplied as part of a complete chipping facility or as a stand-alone debarker
- Can be batch fed directly into hopper or for continuous feed, an optional portable infeed deck is available
- Available with single or multiple modules depending on production requirements
- Waste bark conveyor incorporated into trailer
- **Quick Change™ Debarking Blocks** allow the customer to quickly change the abrasive blocks when worn or to adjust block profile for changing conditions. Various debarking plate profiles available.
- Fixed side wall and centre comb debarking plates are available
- Heavy duty design for durability and long life
- Inclined abrasive plates for dealing with tough species and frozen conditions
- Rotor comb (patented) that expels bark to the waste conveyor below, ensuring complete separation of bark from the wood stream
